## Frontispiece:

*Solenogyne gunnii* (Hook. f.) Cabrera rayless daisy ASTERACEAE

Collected from Craigavon Park, near Green Bay, 7.11.92. Seen at one place, among mown grasses on old gumland. Leaves thinly fleshy, dull lime-green; fruit nearly mature.

The only other Auckland collection of this Australian adventive appears to be that found by Michael Hodgkins at Waikowhai in 1934.

Plant x3; fruit, phyllary x25; leaf detail x10.

R.O. Gardner
